

CLOVER RICH ECO TURF

We have pioneered the first clover rich turf rolls in the country.

These rolls combine Phoenix's own proven grass varieties with the climate smart clover, DoubleRoot, a world first hybrid cross of White Clover and Caucasian Clover.

The result is a highly durable turf with some remarkable qualities...

Drought Resistance: Clovers have deep roots, allowing them to withstand periods of drought better than traditional grass lawns.

Nitrogen Fixation: Clovers have the ability to fix nitrogen from the air into the soil, which helps improve soil fertility and reduces the need for synthetic fertilisers.

Low Maintenance: Our Clover Rich Eco Turf requires less frequent mowing, saving labour and lowering energy consumption.

Attracts Pollinators: Clover flowers attract bees and other pollinators, promoting biodiversity in the lawn ecosystem.

Environmental Benefits: Clovers demand less resources such as water, fertilisers and pesticides, thereby promoting a more eco-friendly lawn alternative.

Tolerance: Clover Rich Eco Turf is more shade resilient, more tolerant to foot traffic and more resistant to dog patching than a grass monoculture lawn.

Our Clover Rich Eco Turf is a mix of 50% Amenity turf varieties, including ryegrasses and Climate Smart Eco Clover, which is a hybrid cross of White Clover and Caucasian Clover. The resultant strain has both rhizomatous and stoloniferous root systems, making it highly durable.

- Turf will be palletised and in conventional rolls, not slabs.
- The target weight for the turf will be 20 kg/roll. If wet, we may reduce the square metreage and increase the number of rolls.
- Our turf will be chilled in the warmer months as per Rysport to save wastage.
- Clover turf does not require a pre laying fertiliser.
- Lay and treat the turf as you would Rysport. The most critical element is watering!

Maintenance

- Clover turf can be mown as normal turf. The more it is mown, the tighter it will be. However, it can accommodate being mown less frequently, (say on a 2 – 3 week basis) and it will have a softer, more naturalistic look.
- Clover turf is ideal for NO MOW MAY and will generally flower well from late May through June, giving the bumble bees a feast!
- As Rysport our Clover Rich Eco Turf is grown without the use of any plastic netting.
